CAREER OBJECTIVE

Fourth-year Bachelor of Science in Information Technology student seeking an internship opportunity to apply classroom knowledge to real-world IT projects. Familiar with front-end web development, database fundamentals, and building web-based systems using HTML, CSS, JavaScript, PHP, and MySQL. Has academic project experience with system planning, interface design, and development tools such as VS Code, Visual Studio 2022, MySQL, XAMPP, and GitHub. Eager to learn from experienced professionals, contribute to a team, and strengthen technical and problem-solving skills.

TECHNICAL SKILLS

- Web Development: HTML, CSS, JavaScript fundamentals; responsive page styling
- Programming & Database: C#, PHP, MySQL, SQL fundamentals
- Tools & Platforms: Visual Studio Code, Visual Studio 2022, XAMPP, GitHub,
- UI/UX & Documentation: Figma, wireframing, prototyping, technical documentation
- General IT: Basic troubleshooting, testing and debugging
- Professional Skills: Communication, teamwork, adaptability, time management, willingness to learn

ACADEMIC PROJECTS

Web-Based Barangay Health Monitoring System with Heatmap Visualization – Capstone project

- Academic capstone project focused on organizing barangay health records and monitoring services, including maternal health, infant records, vaccination, and reported illnesses.
- Working with a web-based system concept using PHP, MySQL, PDO, and mPDF, with heatmap visualization to help present health-related data by purok.
- Contributes to system planning, interface design, database structure, testing, and documentation as part of the student project team.

Barangay Management Information System – C# Windows Forms Application (Academic Project)

- Developed a desktop-based Barangay Management Information System designed to help organize and manage barangay information, resident records, and administrative processes.
- Utilized C# and Windows Forms in Visual Studio 2022 to develop the application's user interface, login authentication, main menu, and other system functionalities.
- Worked on features such as resident information management, barangay document generation using RDLC reports, application settings, and activity log management.
- Applied programming, interface design, and system development concepts to create an organized and user-friendly application for barangay administrative operations.

Anicue – Animal Rescue and Adoption Platform (Concept / Academic Project)

- Developed the concept for a web-based platform to support stray-animal reporting, adoption, and shelter information.
- Explored user roles and interface layouts for adopters and shelter administrators, with emphasis on usability and clear information flow.
